Full Stack Software Developer

Web developer with a background in software and hardware. Experienced in managing large projects as a network administrator for multi-unit retail business with hundreds of employees. Strong analytical and creative mindset focusing on continued learning and writing clean code.

Technical Skills: Ruby, Rails, JavaScript, Vue.JS, HTML, CSS, SQL, Postgres, APIs, and Git

Experience

Actualize, Web Developer

September 2018 – Present

- **Bootcamp:** Completed the intensive, 3-month Actualize bootcamp and learned Ruby, Rails, JavaScript, Vue.JS. Learned how to think as a software engineer and gained the ability to tackle any new technology.
- **Stelt:** Personally, created a style-focused app centered around styles of celebrities and their outfits and emulating their look without breaking the bank. Pictures of a celebrities and their outfits are uploaded alongside pictures of products that look similar to each individual item in the outfit. Each picture is linked to a site where the similar-looking product can be purchased at an affordable price. Server-side built using Ruby on Rails and PostgreSQL. Vue.js JavaScript framework used for client-side. Scraped data for pics used in app using tumble API.

Apprenticeship

- **Desolate Dungeon:** A 2-D platforming Video Game created in Unity. Responsible for Writing Scripts in C# for Enemy AI, physics, damage system and movement.
- **ResuME:** an app made in a group with 10+ to be used as a student portal for new cohorts to manage and improve their resumes. My team handled the back-end. Created the database routes, controllers, and views. used Heroku. worked together and communicated with the different front-end teams.
